Project Vision

With a mission to satiate their customer's appetite and provide a high quality dine-in environment Doki-Doki Delight envisions a future in which their small café can become a 'safe space' for their community. However, their unreliable and outdated paper-based reservation system has caused many inaccuracies and at times it conflicts with their friendly motives. Implementing a web-based café management system will embellish Doki-Doki Delight's mission and enable it to become modernised.

Digitalisation of a management system will allow the primary stakeholders (managers and staff) to carry out their responsibilities effectively. The system will introduce benefits such as: the potential of accidental errors being limited and therefore an increase of accuracy; improved convenience through a greater ease of access to the system – data can be easily amended or deleted; and finally, the Track and Trace implementations will provide a sense of security to the stakeholders – they can feel safe knowing that pandemic measures are in place. Overall, Doki-Doki Delight will be better equipped to serve their community.

Keywords

The following keywords could potentially be used as search terms within a search engine to find the webpage. They are associated to the project.

- *Doki-Doki Delight*
- *Café near me*
- *Coffee near me*
- *Good coffee*
- *Dine-in cafe*

The webpage will need to be accessed by both customers and staff for different reasonings – staff may need to amend venue details etc., whilst customers can book tables and input their contact information. Therefore, the website will be open to the public.
